

Standby Power System Operation & Maintenance (Gen-Op)

Duration: 2.0 Days

Course Description: This is a hands-on certification course and is a series of PowerPoint slides and exercises covering:

- Safety in the engine room or module
- Generator overview
- Stationary generator
- Portable generators
- Phase Rotation Sequencing
- Fuel & battery subsystems
- Generator operation
- Generator troubleshooting

Target Audience: This course is designed for network facing engineers Operations managers and technicians. This training is geared for both the newcomer and experienced employees.

Course materials supplied: A copy of all slides is provided and also software for sizing ac and dc conductors. Certification is provided upon passing a written open-book test.

Min/Max class size: Although the target class size is 5 – 8 students, any class size from 3 to 15 is possible.

Prerequisite skills: A basic familiarization with central offices or cell sites is helpful.

Cost: As this is a suit-cased course, travel and living time and expense can have a significant impact on overall cost as will the availability of suitable conference room facilities. Please contact us for a site-specific quotation. We'll need to know the approximate headcount, where in the country and whether a suitable conference room is available.

Note: Because part of this training involves the hands-on operating of the facility standby generators the instructor will arrive a day early to become familiar with the particular installation. Further, we think it's prudent to perform the engine runs during the Maintenance Window unless your facility manager feels that daytime operation is preferred.
